BULBS FOR WINTER FLOWERING

To My Friends and Customers:

From September until frost how often we sigh at the thought of Winter! A backward glance, and the daily deepening flood of foliage and flowers seems to vanish, leaving bleak, bare branches against a cold and cheerless sky. Yet think, and realize that while time has taught that kindled fires may warm the body, it needs a touch of nature to reach the soul. Therefore, in the upward course the art of Horticulture gives flowers to blossom in the heart of Winter. By far the best and most of these come from bulbs, whose nature is to gather and store strength under the Summer sun to insure the future flowers.

It is wonderful how flower planters have come to recognize bulbs as giving the best results for growing indoors during Winter. They are accepted as absolutely sure to satisfy—they cannot fail—the bloom is in the bulb. Whether in open ground or in pots in the house, growing and caring for them is easy and simple; but that none may fear failure, I give detailed directions for care and culture elsewhere. All the bulbs offered, with the few exceptions elsewhere noted, are entirely hardy and suitable for planting in the garden, where they will thrive, naturally taking care of themselves.

PLEASE READ FOLLOWING REMARKS CAREFULLY.

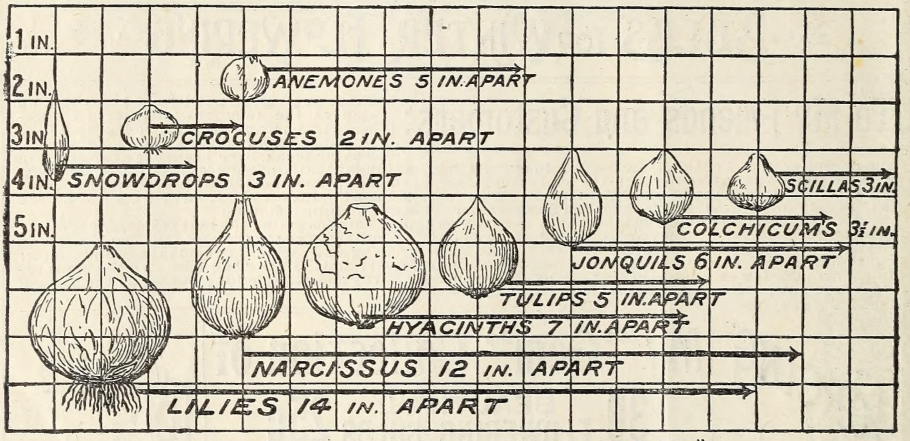
I cannot send Seeds, Plants and Bulbs C. O. D. Write your Name, Postoffice, Street and Number, County, State, and your Express Office plainly in black ink, on every order, and every time you write to me. Give plain shipping directions; where none are given I use my best judgement, but it must be at your expense and risk.

Prices given in this catalogue include prepayment by mail on **Bulbs, Plants and Seeds, except** where offered "by express," then it is meant that the purchaser is to pay charges.

Always send cash with order (I can only send to value of money received) by **New York or Chicago Draft,** Registered Letter. **Postoffice Money Order, Express Money Order,** or **Cash by Express,** in any of these ways at my risk. Postage stamps are taken as cash for small amounts, but they must be **carefully wrapped in wax paper,** so they will not stick together. Where coin is sent it should be carefully wrapped or pasted between two pieces of paper or on cardboard. I cannot be responsible for loose coin, as it cuts through the envelope and is lost.

FLOWERING BULBS

Are of the greatest possible value for window culture during the Winter months. Other flowers may fail, but bulbs never, without apparent cause. They are not only certain to bloom abundantly, but are the easiest cared for of all flowers, always responding to the simplest culture. For potting soil, any good garden loam will answer; if fertilizer is used or needed, I recommend thoroughly rotted and pulverized cow manure. The bulbs can be potted any time from September to middle of December, though the earlier the better. In planting, make a space just deep enough to cover the bulb, which should never be pressed in by force, as this packs the soil under them, and when the roots start the bulbs may be lifted. After planting, water well and place the pots or boxes in a cool, dark cellar, or similar place. This treatment is to develope a strong growth of roots, which is very necessary to secure vigorous flower stalks. During this period, if the soil shows signs of dryness, it should be watered. After six or eight weeks, when the shoots begin to show decided life, bring into a light, sunny window, water frequently, and give plenty of fresh air Only moderate heat is required; avoid a high and close temperature. After bulbs in pots have done blooming they can be set away in the cellar, or some cool, dry place, and allowed to dry out and naturally mature. The following September they can be shaken out and repotted, or planted in the open ground to remain a season, when they will recover much of the strength lost by being forced in the Winter. Many who want the very finest flowers buy fresh imported bulbs each year, as they undoubtedly yield the most perfect results. But, on the other hand, bulbs that have been given a complete rest succeed well the second season.



THIS ILLUSTRATION IS COPIED FROM "POPULAR GARDENING."

BULBS IN THE OPEN GROUND.

BULBS suitable for planting in the open ground, offered in this Catalogue, may be planted any time from September to early December, before Winter frost sets in. A rich soil is not necessary; in fact, they thrive best in well-drained, light, loamy earth. If the soil is heavy, I would recommend spreading an inch of ordinary road sand over it before digging. For the proper depth of planting and distances apart, follow the excellent chart given above. Just before Winter sets in, the beds should be covered with leaves, straw, or any coarse litter. This mulch is not so much for protection as to insure the vitality of the bulbs the first Winter in the open ground. By the second season they will become fully established and able to take care of themselves. It should not be forgotten, in the culture of bulbs, that the leaves of one year makes the flowers of the next. Therefore, they should be allowed to fully mature: cutting away the foliage, as is often done, is certain to weaken the bulbs, and in time it will destroy them. As a rule, bulbs are long lived, and in the open ground increase in beauty and value every year. Considering their permanent qualities they are not expensive. In place of formal beds, I would recommend a more natural arrangement, admitting of planting the different families together in clumps or lines along walks or drives or in the shubbery borders, as likely to be more tasteful and satisfactory to the planter. In this latitude the flowering season begins in April. The flowers may be freely cut without injury to the bulbs; in fact, it is a good thing to do just before they begin to fade, as this will strengthen the bulbs. If it is necessary to remove the beds to admit planting other flowers for Summer blooming, they should not be taken up before the leaves and stems are thoroughly dried and the bulbs ripen. They can then be carefully cleaned and packed in dry sand or sawdust in a cool, dry place for planting again the following Autumn.

NOTICE—I cannot fill any plant orders for amounts less than 25 cents, unless 10 cents be added to pay postage and packing; in this case, however, I always send extra good plants, when postage is added for Single Plant orders.

SPECIAL EXPRESS RATES—A 20 per cent. reduction on **plants, seeds, bulbs** and small fruits is now granted by the express companies on the regular merchandise rate. Express charges are now very moderate, minimum charge being 35 cents on small packages. By arrangement between two or more persons they can have their orders come together, thus reducing the expressage to a nominal amount.

Freesia Refracta Alba.

The charming and novel blossoms of this popular flowering bulb are well shown in the illustration. For Winter blooming in the house it is probably today the most popular of all. It is sure to succeed and flower elegantly for any one in any situation. The splendid blossoms are borne in great profusion; color, the purest white, the lower petals touched with yellow. The perfume is delicious, reminding one of Hyacinth, Mignonette and Jessamine combined. There are six to eight flowers on a stem nine inches high, which are particularly valuable for cutting, remaining in good condition for two weeks. Four to six bulbs can be planted in a five-inch pot, box or pan, and grown like other bulbs, for the culture of which see page 2. By planting at intervals from September to November, a succession of flowers can be had throughout the Winter. I offer the largest and finest bulbs, and earnestly recommend every one to plant at least a few of this lovely variety.

CULTURE OF THE HYACINTH.

CULTURE IN POTS—The best soil to use is composed of good fibrous loam with a liberal addition of leaf soil, sharp sand and well decayed cow manure. The whole should be well mixed and left to stand some time before use. In potting leave the top of the bulb exposed, and let the soil be moderately moist. The pots should then at once be placed outdoors on a bed of wet ashes and covered with 6 inches of the same material or good garden soil and left exposed to the weather. When the bulbs are well rooted and about an inch of the top growth has been made, they may be removed indoors to force, first into a subdued light until the blanched foliage has attained its full green color, and then into the sunniest situation at command. Abundance of air, a moderately moist atmosphere and plenty of water at the roots is then necessary for early, well developed flower spikes. A dry or frosty atmosphere or a draughty situation will cause the flower buds to shrivel. Forcing should only be done gently, the temperature like that of a cool greenhouse, a sitting room window or frame, always selecting the sunniest and most genial situation.

CULTURE IN GLASSES—Pure clear water should be used, with a piece or two of charcoal in it to keep the water sweet. The base of bulb should at all times just touch the water. Place the glass in a cool dark place to encourage root growth. When the glasses are nearly full of roots admit them to the light gradually, and then to the sunniest place at command till the flower spikes are well developed. Avoid a too dry or frosty atmosphere or a draughty situation, as such conditions will often cause the flower buds to shrivel.

CULTURE IN BEDS AND BORDERS—For its successful cultivation in open air, the Hyacinth likes a light, rich soil, which should be dug to a depth of 18 inches previous to planting the bulbs, the addition of sharp sand being recommended if the soil is very heavy. The ground should also be effectually drained. After digging the ground well, remove the top soil to a depth of 4 inches, and set the bulbs at equal distances of 6 to 8 inches, then cover them with the soil which had been removed and press and level the same with board or plank. From the time of their appearing above ground in Spring they require little or no attention, but a slight covering of small litter or straw may be used with advantage in very exposed situations in severe weather. The planting of the bulbs should be done in October and November.

ROMAN HYACINTHS.

I wish to call special attention to these beautiful Roman Hyacinths, which are so valuable for early Winter blooming. They are among the few flowers which can be had as early as Christmas and New Years. Each bulb throws up several spikes of flowers, very beautiful and fragrant, and when kept in a cool room will keep perfect for weeks. Three can be planted in a 4 or 5 inch pot, and will soon be in flower. In the garden they are first of all Hyacinths to bloom. I offer extra large bulbs. Do not fail to plant a good lot of them for Winter.

CHOICE MIXED BEDDING TULIPS.—I have a large stock of unnamed Tulips for bedding, which I have priced so low as to make a large mass of these showy flowers a matter of trifling expense. They are excellent bulbs, and will bear handsome blooms. Double and single collections are kept separate. The Mixed Double Tulips are best adapted for planting out in the garden, and will bear forcing as well as other varieties; and for a succession should be planted in every garden. Several hundred bulbs at the quotations below involve less expense than is usually required to secure a few dozen summer bedding plants, and in the matter of display are fully as valuable during their season as an equal number of ordinary blooming plants.

THE CHINESE SACRED LILY.

The "Shui Sin Far," or Water Fairy Flower, Joss Flower, Flower of the Gods, etc., as it is called by the Celestials, is a variety of Narcissus bearing in lavish profusion chaste flowers in silvery white, with golden-yellow cups. They are of exquisite beauty and entrancing perfume. It is grown by the Chinese according to their ancient custom, to herald the advent of their new year, and as a symbol of good luck. The bulbs are grown by a method known only to themselves, whereby they attain great size and vitality, insuring luxuriant growth and immense spikes of flowers. In fact, the incredibly short time required to bring the bulbs into bloom (four to six weeks after planting) is one of the wonders of nature. "You can almost see them grow." successfully almost everywhere and with everybody. They do well in pots of earth, but are novel and beautiful grown in shallow bowls of water, with enough fancy pebbles to prevent them from toppling over when in bloom. A dozen bulbs started at intervals will give a succession of flowers throughout the Winter. See cut. I am importing direct from China immense bulbs of the true large flowering variety. **Price, 15 cents each; 5 for 50 cents.** A dozen bulbs planted one a week will give a supply of flowers all Winter.

GIANT GOLDEN SACRED LILY.

The First Flowers of Spring—Gay Flowering Crocus of Many Colors.

THE CROCUS is one of the first flowers of Spring, and one of the best for blooming in the house during Winter. Half a dozen bulbs may be planted in a pot and will make a pretty show. For garden culture plant the bulbs two inches deep and two or three inches apart. They are so cheap and so pretty they ought to be found in every garden in abundance. They bloom splendidly when planted on the lawn among the grass. They lift up their broad heads through the sod very early, and give the lawn a charming aspect. The sorts we offer are especially strong and fine. **Price, 10 cents per dozen, by mail; 60 cents per 100; by express, 50 cents per 100, at purchaser's expense.**

Feather or Cockade Hyacinths.—Of this elegant Hyacinth the spike of bloom resembles a feathery plume, and is of a fine blue color. The bloom first appears as a tassel about an inch or two long, of a rich blue color, but as it expands, is marked with pink, and at the end of two months is developed into a beautiful plume from six to ten inches in length, of exquisite coloring—pink, violet and blue. Desirable for both house and garden. The bulbs rapidly increase and are perfectly hardy. I have secured a fine supply this season. **Price, two for 5 cents; twelve for 25 cents.**

ORINTHOGALUM ARABICUM

ORNITHOGALUM ARABICUM.

The Star of Bethlehem.

I INTRODUCE this as a new Winter blooming bulb of great beauty and value. In magnificence there is nothing like it among the Winter blooming bulbs or plants. Even the grand Hyacinth must be preceded by the stately beauty of this flower. It is a native of Arabia. The bulb is large and solid, closely resembling that of a Hyacinth, and requiring exactly the same culture. Leaves long and narrow. The flower spikes are eighteen to twenty-four inches high, strong and graceful, bearing an immense cluster of large pearly-white flowers, having a jet black center. The individual flowers keep many weeks before fading, so that for more than a month this grand spike of bloom is in full glory. Its durability is almost without an equal among flowers. Add this to its delicate aromatic fragrance, and we have a Winter-bloomer almost without a rival. Its culture is the easiest, as it will grow in any position in any window. A bulb can be planted in a four-inch pot or several in a larger pot or box. Pot in September, October or November. They can even be kept and planted as late as February first. For open ground culture they do well if kept from freezing severely. **Price, 5 cents each; 6 for 25 cents.**

THE GRAPE HYACINTH—IMPROVED.

THIS charming little gem should be found in every garden in abundance. It has been termed the "Blue Lily of the Valley," and when planted in a mass with that sweet flower it does resemble it to some extent, and forms a most fascinating combination. It grows about the same height and blooms about the same time each Spring. It increases rapidly, and when once planted a mass of beautiful blossoms, which will increase each year, is insured for a lifetime. But for Winter blooming in pots it is of the greatest value. Plant five or six bulbs in a five-inch pot, and you will have as lovely a pot of blooms as you can imagine. Words fail to do it justice. Flower stems grow a foot in height, bearing a dense spike of sky-blue bells tipped with white, and oh! so lovely. An improved strain of Grape Hyacinth, much superior to the old form.

IMPROVED BLUE—Price, 3 for 5 cents; twelve for 15 cents.

SNOW WHITE—New and scarce. **Price, two for 5 cents; six for 10 cents.**

CALOCHORTUS, Mariposa or Butterfly Tulips.—These bulbs are little known or cultivated, as they are not hardy enough to stand our Winters in the open ground without protection, but for blooming in pots they are unsurpassed. The flowers are very large, borne on long stems and are of the most charming butterfly colors, white, yellow, buff, crimson, purple, spotted and shaded in a charming manner. For Winter bloom they require only to be potted (four or five in a five-inch pot) and treated like Hyacinths or Crocus. When in bloom they will be a marvel of beauty and last a long time. Not suitable for out-door planting, except in the South or Pacific coast. **CALOCHORTUS, Finest Named Varieties Mixed**—This mixture comprises all the finest varieties. Do not fail to try a dozen. **Price, 5 cents each; three for 10 cents; twelve for 35 cents.**

Beautiful Lilies for the House or Garden.

LILIUM HARRISII

The True Bermuda Easter Lily, Lilium Harrisii.

This peerless Lily is the greatest acquisition to floriculture in many years. Their profusion of bloom, the remarkably short time required to bring them into flower, and the certainty to produce abundant bloom, and also the ease with which they can be manipulated to be flowered at any desired period, such as Christmas, Easter and other special occasions, render them invaluable. The flowers are delightfully fragrant, pure waxy-white, of great substance, and if cut as soon as they are open, or partially open, they can be kept for two weeks. A short time only is required to bring them into bloom. Bulbs potted in August can be had in flower in November if desired. A succession of bloom can be kept up from November to May by bringing the pots of rooted bulbs in from cold frames at intervals throughout the Winter. The quantity of bloom produced is marvelous, the average production of bulbs five to seven inches in circumference, even when forced, is from five to eight flowers, and of bulbs seven to nine inches, eight to twelve flowers; and if desired a second crop of flowers, frequently equal to the first, can be secured the same season by drying the plants off after blooming for a time and then again starting them. Blooming plants in pots form typical Easter offerings and presents, for decoration of the window, table, house and church, nothing is more appropriately beautiful and highly appreciated. Thousands upon thousands are sold in the large cities every Winter for this purpose. As a garden Lily it is of great beauty, being entirely hardy excepting in Northern climates, where it requires a protection of leaves or litter to a depth of five or six inches. (See cut.)

Price, for large bulbs, 15 cents each; 4 for 50 cents; 10 for $1.00.

Lily Auratum, (The Golden-Banded Lily.)

Of the many Lilies we owe to Japan, none can compare with the Great Golden-Banded Lily. It is the grandest of all Lilies for growing in the open ground or in pots; entirely hardy, lasts for years, increasing in size and beauty each season. Stalks three to six feet high, crowned with masses of splendid white and gold flowers, four to six inches in diameter. The odor is fascinating. I offer fine, strong bulbs, sure to bloom, standard size, first quality. **Price, 25 cents each; 3 for 60 cents.**

Lily Speciosum Rubrum.

This is one of the most popular and satisfactory of all Lilies, and is considered by many as the finest of all Lilies. The flowers are bright crimson and white spotted. Splendid large flowers borne in clusters, stem 2 to 3 feet. **Price, 20 cents each; 3 for 50 cents.**

Lilium Tigrinum, fl. pl., (Double Tiger Lily.)

This magnificent Lily is borne in immense clusters on tall stems; the flowers are very large, frequently six inches across, and very double; color, deep fiery red, spotted with black; any illustration gives but a faint idea of the showiness of this superb Lily. **Price, 10 cents each; 3 for 25 cents.**

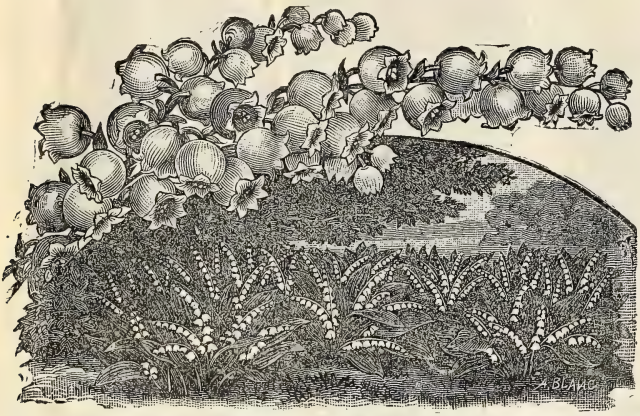
German Mammoth Lily of the Vally.



No flower is more tenderly loved than this. Its graceful waxen bells are filled to overflowing with the most delicious perfume, and, set among its own glossy green leaves, it is indeed the gem of the garden. It succeeds in the open ground in almost any situation, but prefers a somewhat moist location A top dressing of well rotted manure or rich soil in the Autumn will be found a great benefit. For house culture they are invaluable and easily managed. Place rather thickly in pots or boxes, scattering a light soil or turfy loam among the roots, but not over the tops, then cover with moss or some such substance, and place outdoors until a sharp frost, when they should be brought indoors and given plenty of heat and considerable moisture. Take care to keep them shaded from the hot sun with cloth until the stems are 2 or 3 inches high, when the shading should be removed to develope the flower. A charming sight, in large patches, in partially shaded localities around the lawn, near borders of streams, etc.

PRICE—for the German Mammoth, Large Flowering Lily of the Valley, 5 cents each; 6 for 25 cents, 12 for 40 cents.
READY FOR SHIPMENT IN NOVEMBER.

They attain a height of from ten to fifteen inches, and the hues and colors of their many varieties, varying from pure white and yellow to bright vermillion and crimson, are really beautiful. The Persian Ranunculus are a little smaller than the French, and also more dwarf. However, their colors are as fine and exhibit the most beautiful shades, and are of the most graceful form. The Turban, or Turkish Ranunculus, differ very much from each other, and display lovely oriental beauty of coloring. Can be grown easily in pots or out of doors if protected. See cut.

Tritelia Uniflora.

The bulbs are small and several can be placed in a pot, each one of which will send up several flower scapes, bearing star-shaped blossoms one inch in diameter, pure white, elegantly lined with celestial blue. As the flowers follow each other successively, and last a long time before fading, a pot of these bulbs is never without flowers for several months in mid-Winter. They are also quite hardy, and can be planted in the open ground, where they will bloom elegantly in the early Spring. We earnestly advise all lovers of flowers to plant this beautiful gem. It is sure to delight you. It is of the easiest culture and always sure to thrive. **Price, fine bulbs, 4 cents each; 3 for 10 cents; 12 for 35 cents.**

Iris Susiana.

If every lover of flowers could see this grand plant in bloom, I really believe not one in one hundred would refuse to pay one dollar each for one or more bulbs of it. Among all flowers there is hardly one of such oddity and striking beauty. The bloom is of enormous size, and in describing it we say "it is chocolate black mottled, beautifully veined with grayish white," yet from this no one can form a correct idea of how the plant looks. It is indescribable, and the planter will be surprised when he sees it. It is perfectly hardy, and blooms in May. In July the foliage dies down, and the bulbs lie dormant until late Fall or the next Spring. Try it, and when it blooms you will undoubtedly pronounce it the most beautiful flower in your garden. Black Calla, Arum Sanctum.

This magnificent flower often measures one foot in length and five to eight inches in width. Beautifully shaped and turned, sweet scented. TUBEROUS BEGONIA

TUBEROUS BEGONIAS FOR POT PLANTS

are now classed among the handsomest Flowering Bulbs. The record of floriculture does not list a flower that has been so greatly increased in size, improved in form, and intensified in color as this. They bloom continually throughout the Spring and Summer, the flowers often exceeding six inches in diameter, and outrival in color the most brilliant and dazzling Geranium flowers; and from the time the first blossom appears until all growth is stopped by frost they are never out of bloom, and are borne in such profusion that the rich green foliage is almost hidden under the load of blossoms. For a bedding plant outdoors or for pot culture in the house the Tuberous Rooted Begonia can not fail to give satisfaction, even to the most inexperienced. I have fine bulbs in the following colors: Crimson, Scarlet, Rose, Yellow, White and Pink.

Each color, 15c; or the set of Six colors for 75c. Not ready until in November.

KNOWN TO THE FLORAL WORLD.

Price, 5 Cents Each Except Where Noted. Large, two-year-old Plants, 25 Cents Each, Except Where Noted.

CLIMBING METEOR—The New Rose now introduced for the first time, might more properly be called a Perpetual Blooming Climbing General Jacqueminot. Though a sport from the finest of all Hybrid Teas—Meteor—it is much larger, and of a deeper rich color, equalled only by the peerless Jacqueminot, and will produce twenty blossoms to Jacqueminot's one. It is a Rose which will make ten to fifteen feet of growth in a season, and show a profusion of bloom every day. Foliage, strong, healthy and luxuriant. Buds exquisite; flowers, large, beautifully shaped, and of that rich, dark velvety crimson color seen only in the Jacqueminot. Much deeper and richer than Meteor. I do not hesitate to pronounce it the finest Rose in existence for Summer blooming, as it will make a large growth and is loaded with its glorious blossoms all the time. For Winter blooming it has few equals in beauty and probably none in profusion. Just the Rose to train up in a conservatory or bay window, where its exquisite blossoms will show to wonderful advantage. **Price, 10 cts each, 3 for 25 cts; large, two-year-old plants, 50 cts each.**

EMPRESS of CHINA, the New Perpetual Blooming Climbing Rose—It commences to flower early in Summer and from that time until late in the Fall blooms continuously. It is entirely hardy, having withstood a temperature of 16 degrees below zero unprotected without injury. In habit of growth it is vigorous, and in this respect is unsurpassed; small plants will make a growth of 6 to 8 feet in a single season. The flowers are of medium size, very graceful in form and highly fragrant. The bud is pointed and very shapely and is borne on long, stiff stems. Color, a soft dark red and as the flower expands changes to an apple blossom pink. Think of Roses from May to December! It is surely the Rose for amateurs, as it needs but slight attention and no protection. **Price, 15 cents; large two-year-old plants, 50 cents.**

GLORIE de DIJON—Our Southern friends are unbounded in their admiration of this fine Rose, which is seen there in its fullest perfection, being hardy in their section, where it is used as a pillar Rose. It is noted for the great size of its flowers, delicate Tea scent, and its exquisite shades of color, being a blending of amber, carmine and cream. One of the finest Roses on our list. **Price, 15 cents each; large, two-year-old plants, 30 cents each.**

WALTHAM QUEEN—A splendid new, climbing Rose Hardy in the North. It is a strong grower and continuous bloomer. Flowers, large, full and sweet.
